| Project Name | Project - Visualization Tool for Electric Vehicle Charge and Range Analysis |
| Maximum Marks | 2 Marks |

Proposed Solution :

| S.No. | Parameter | Description |
|---|---|---|
| 1. | Problem Statement (Problem to be solved) | V data such as charging patterns, battery performance, and vehicle efficiency is scattered and difficult to analyze. Stakeholders need a clear system to visualize and understand EV data. |
| 2. | Idea / Solution description | Develop a Tableau-based dashboard tool to analyze EV charging patterns, vehicle range, efficiency, and pricing. Data is stored in a database and visualized using interactive charts and maps. |
| 3. | Novelty / Uniqueness | Combines data analytics, Tableau dashboards, and web integration with Flask to provide interactive EV insights in one platform. |
| 4. | Social Impact / Customer Satisfaction | Helps planners, fleet managers, and consumers make better decisions about EV usage, efficiency, and charging infrastructure. |
| 5. | Business Model (Revenue Model) | Can be offered as a dashboard analytics service for EV companies, fleet operators, and government agencies. |
| 6. | Scalability of the Solution | The system can be expanded with more EV datasets, regions, and real-time data integration in the future. |
